+1 (512) 766-4910 | harshith.alva1853@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | Austin, Texas

PROFESSIONAL SUMMARY

Experienced Full Stack Developer with 4+ years of expertise in **React.js**, **Node.js**, **Next.js**, **Python**, and **AWS**, specializing in building scalable, high-performance web applications. Skilled in cloud-native development, CI/CD automation, microservices, and performance optimization. Proficient in state management, **REST/GraphQL** APIs, authentication, and **DevOps** tools like Docker and Kubernetes. Passionate about emerging web technologies to deliver efficient, secure, and user-centric solutions.

TECHNICAL SKILLS

Languages:	JavaScript, TypeScript, Python, Java, HTML5, CSS3
Framework / Libraries:	React.js, Next.js, Node.js, Flask, Spring Boot, Wordpress
Database & Tools:	MySQL, MongoDB, PostgreSQL, Kafka, Docker, Kubernetes
Testing & DevOps:	Selenium, CI/CD (GitLab, GitHub Actions), Jest, Terraform, OAuth 2.0, JWT
API Development & Integration:	REST, GraphQL, Google Maps, Mapbox, WebSockets, Firebase
Cloud Technologies	AWS (EC2, S3, Lambda, RDS), Azure (Cloud Services, Azure DevOps)

WORK EXPERIENCE

Full-Stack Developer | BizInc | Atlanta, GA (Sep 2024 - Present)

- Engineered an **employer portal** to help the client streamline hiring, cut costs, and scale the team without sacrificing efficiency.
- Built **React** components and integrated **RESTful** APIs, optimized **MongoDB** queries, reducing data retrieval time by 40%.
- Stagnant user engagement prompted **A/B testing** and user research on iterations, resulting in a 25% boost in user interactions.
- Accessibility challenges in cross-device and web usability were resolved by using **WCAG** guidelines for users with disabilities.
- Created reusable, modular UI components, to streamline development processes and cut feature implementation time by 40%.
- High-fidelity wireframes require optimised prototyping workflows using **Figma** in **KANBAN** sprint, cutting design time by 60%.

Software Engineer | LME Services | Hoffman Estates, Illinois (Jul 2024 - Sep 2024)

- Low B2C user retention led to building their front-end interfaces with **Next.js** and **Tailwind CSS**, increasing engagement by 30%.
- Faced with backend inefficiencies, built scalable **REST APIs** with **Node.js** and **TypeScript**, boosting server performance.
- Improved state management with **Redux** and **Context** API, reducing workflow issues and doubling application responsiveness.
- Reduced API latency by 40% through database indexing, query refinement, and **Terraform**-based infrastructure optimization.
- Mitigated security vulnerabilities by integrating **JWT** and **OAuth 2.0** for secure authentication and role-based access control.
- Enhanced page load by 50% through lazy loading, caching techniques, and server-side rendering (SSR) for faster performance.

Full-Stack Developer Intern | Uber | USA (Dec 2023 - May 2024)

- Refined real-time ride-matching accuracy, allocation time, and UI concerns using **Node.js**-based algorithms, **Kafka** and **React**.
- Dynamic routing required integration of **Google Maps API** and **Mapbox** for improved wait times and reduced ride calculations.
- Minimized real-time notification delays through **WebSockets**, **AWS S3** and **Firebase** to enable faster ride status updates.
- High API response times were addressed by integrating **GraphQL APIs**, optimizing data retrieval and reducing response by 25%.
- Overcame scalability issues over traffic by deploying **AWS (EC2, Lambda, RDS)**, ensuring cost-effective cloud infrastructure.

Software Engineer | Danske IT (Infosys) | Bangalore, KA, India (Aug 2019 - Jul 2022)

- Spearheaded modernization of **COBOL**-based banking system functionalities, by collaborating with **Agile** cross-functional teams.
- Migrated Legacy systems to **React**, **PostgreSQL**, **Java** and **Spring Boot**, achieving 70% operational cost savings and 2x uptime.
- Implemented CI/CD pipelines via **GitLab**, **Azure DevOps**, reducing deployment time by 40% and production downtime by 30%.
- Automated 60% of manual batch processing and reporting tasks using **Python**, **Selenium** and **VBA** scripts, minimizing errors.
- Resolved 70% of production incidents by analyzing **ServiceNow** logs and optimizing **DB2** SQL queries for better performance.
- Led Agile sprint planning over requirements gathering in **Jira** with DevOps, QA, Danish Stakeholders and Business Analysts.

PROJECTS

CLOUD-BASED MEDIA CONSUMPTION APP USING MICROSERVICES AND BLOCKCHAIN

- Built Image-sharing platform with **React**, **Docker**, **SpringBoot** microservices on AWS, & **Blockchain** for secure authentication.
- Implemented content moderation with **TensorFlow.js** and **MobileNet** Neural Network, ensuring real-time image analysis.

END-TO-END FOOD RECIPE IDENTIFICATION

- Designed a scalable ETL pipeline using **Kaggle CLI**, Apache **Airflow**, and **EfficientNet-Lite** for automated food classification.
- Optimized **MySQL** storage for indexing strategies, and deployed **Flask** APIs in **Docker** containers to serve real-time predictions.

EDUCATION

Masters in Computer Science California State University Fullerton, CA	May 2024
Bachelor in Information Science BNM Institute of Technology, India	May 2019
